

Month	Activity	Observations
Oct.	Joined and brainstormed ideas.	
Nov.	We researched about our project and submitted project plan	
Dec.	We talked about seeds and plants and what we need to do. Project was approved	
Jan.	Finished list closed on types of seeds and brainstormed prototypes.	<p>Radish:Germination, 4-7 Lettuce:Germination, 7-10 Basil:Germination, 7-14</p> 
Feb.	<p>Feb 3: Purchased Items Feb 4: Started seeding by laying seeds on a moist napkin sealed in a ziploc and waiting for germination</p>	<ol style="list-style-type: none"> <li>1. Keeping the germination packet moist</li> <li>2. On 9th morning check for germination if possible</li> </ol> 

		
Feb	Feb 7: Watered 25 squirts to each	Saw ample germination in lettuce & radish but no germination for basil
Feb	Feb 8: Planted all seeds into 2 boxes equally Feb 9: Watered plants	Feb: 8 Lettuce and radish both sprouted but basil has not germinated
Feb	Feb 10: no activity	Feb 10: Saw huge amounts of growth for both boxes. Nearly 2-3 cm of growth.
Feb	Feb 13: Water both boxes, 25 squirts each. Named boxes\	Feb 13: No sprouting from basil seeds. Box A has a taller stem while Box B has more sprouts with more leaves.

		
<p>Feb.</p>	<p>Feb 16: Watered 40 squirts to each box.</p>	

Feb:	Feb 20: Watered 30 squirts to each box.	Feb: 20 No growth for basil on both boxes. Box A has more stringy plants while Box B seems to grow bigger each day.
Feb.	Feb 22: Watered plants. 30 squirts each box.	No observations.
Feb.	Feb 24: Watering plants. 30 squirts each box	No observations.

Feb.

Feb 27: Watering plants. 30  
squirts each box

Mar.

Mar 2: watered plants. 30  
squirts each box

Mar.

Mar 5

Very little observations made.

March	March 7 Observed fungi in the Box B soil- sprayed Lemon rass oil diluted with water	

March

March 11 The Sprouts in Box A without extra grow light seem to be degrading, while Box B was lush green.
