

Logbook

Feb 1

We started researching basic information about the project mainly on Google search.

<https://en.wikipedia.org/wiki/Urbanization>

<https://shorturl.at/F9Uf1>

<https://shorturl.at/tPqdf>

etc.

Feb 15

We started searching for images, graphs, and data that fit our topic. When we find appropriate graphs, we copy them to a document.

https://en.wikipedia.org/wiki/List_of_countries_by_suicide_rate

<https://shorturl.at/csaUT>

<https://blog.londoloji.com/2024/01/22/do-wild-animals-live-happy-lives/>

Bee attack, bear attack, depression rates, etc.

Feb 21

We did more research, and We wrote hypotheses, problems, and Data.

Hypothesis

Our project is about how urbanization affects the attitudes and lives of animals and humans. So, we believe that as urbanization grows, people are benefiting from the busier and livelier area that is growing around them, but animals are becoming more hostile and sad as their habitat decreases. Throughout this project, you will see graphs and statistics to try and prove our point.

Data

We did some research and found that Finland is the happiest country in the world, as decided in 2024. Then we looked at the urban land to rural land and found that in 2024, 73% of Finland

residents live in an urban area. As urbanization continued, the wolf population in Finland decreased by 7% from 2022 to 2023.

Problem/why did we do this project

The world's stress level has grown, and people seem to be less happy. So we want to know why. Is urbanization causing people to stress more, or are people stressed about other things in their lives?

March 1

In the past week, we wrote out the research and conclusion part of the project.

Research

As urbanization grows, people are becoming happier, contrary to what we thought. Let's take the happiest country decided in 2024, Finland, and approximately 73% of people who live in Finland live in an urban area. And as urbanization continues, schools and other useful buildings are being built more and more. But even though urbanization can be a good thing for people, it can still be a bad thing through pollution, overcrowding, lack of natural environments, and many other things. Through pollution, our atmosphere weakens and makes our air dirtier. Through overcrowding, not only do people struggle to get from one place to another, but it causes many people to become homeless. And through the lack of a natural environment, people will stop seeing the true beauty of the world.

March 8

In this past week, we finalized the research and printed the work. We started to work on aesthetics to get the printed informations on the trifold.

In the next week, constantly

We practice our presentation over and over again.
