

Day 1,

Today I chose my topic, aviation, then asked my question which plane tail has the best rudder for turning at cruise! I also made my hypotheses and introduced how a plane's fin and rudder work. I am comparing these 3 planes: 747, A380, and Concorde. Then I conducted my research.

Day 2

I finished my research and started my analysis

Day 3 i finished my analysis and my conclusion. Then i added some facts and also just check my work and added some touches like images and pics

Days onward

For the rest of these days i added images and just played around with it

After qualifying to CYSF, I backed up more research and more info on how rudders work, and I added a section for the economic and safety of the rudder.

Now i cant update this 1 but im gonna start working on my trifold now.
