

Red wigglers research

1. You can call red wigglers, red worms, tiger worms, manure worms, composting worms, and the trout worm. But we like to call them red wigglers.
2. Red wigglers are among the best composting worms available
3. Did you know that Red wigglers do not have eyes?
4. Worm castings are WORM POO

Hypothesis

We think that the pot with the worms is going to grow the biggest because they produce more castings and creates airways for the plant to breathe.

How our project is going to work

How our project is going to work is: we have 3 pots, one with worms, one with worm castings and one with just dirt.

Why we chose Red wigglers

We chose red wigglers because red wigglers are among the best composting worms available\
